

Independent Fork Positioners

Independent Fork Positioners - A fork positioner is a tool constructed out of top quality materials designed to endure the most difficult operations and work environments. This piece of equipment can enable the one driving to be able to maneuver the blades hydraulically without leaving the seat. Side shifting models have the added ability to be able to laterally position the entire load or the arms so as to facilitate much more accurate carrying and position in a quicker and more efficient manner.

The blade pocket is rather unique and enables the operator to safely sway the forks into position without any worry of damaging the positioning cylinders. This allows the operator the alternative to be able to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages can be transformed into fork positioners on existing units.
