

Fork Positioner for Forklifts

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus which allows the person driving to be able to control the lift truck without leaving the seat. They are constructed out of top quality materials and are designed to be able to endure the most demanding procedures and work environments. Side shifting models have the extra ability to be able to laterally position the entire load or the arms so as to facilitate more precise carrying and position in a faster and more efficient manner.

The blade pocket is rather unique and could enable the individual operating it to be able to safely sway the forks into position without any worry of destroying the positioning cylinders. This could allow the operator the choice to be able to execute independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into blade positioners on existing units.
